

Purpose:

The purpose of the proposed project is to improve mobility, safety and operations by adding capacity with proposed US 175 main lanes, diverting US 175 main lane traffic from cross streets through grade separated interchanges at BUS 175 and FM 1895 and modifying ramp configurations.

Need:

The proposed improvements are needed because the existing roadway facility within the project limits does not meet future traffic capacity demands and to improve traffic operations in the area.
