Community Impacts Assessment Technical Report

Project Name: US 75 Peak Hour Technology Lanes

Control Section Job Number (CSJ): 0047-06-158, 0047-06-163, 0047-07-232

Report Date: 1/19/2023

District: Dallas

County(ies): Dallas and Collin

Let Date: 02/2023

Project Classification: Operational improvements

Please refer to the italicized instructions throughout this form for guidance in determining which section should be completed. More detailed information on filling out this form is available in Section Two of the Environmental Handbook - Community Impacts, Environmental Justice, Limited English Proficiency and Title VI in the [Community Impacts Assessment Toolkit](#) available on TxDOT.gov. For further assistance in developing this report or to discuss review comments on previous analyses, please contact the Environmental Affairs Division (ENV).

A. Project Screening

Would the proposed project involve ANY of the following conditions?

- Creation of a new grade separation that is limited to only one level (i.e. creating an overpass where one roadway will pass over another roadway, which does not result in a multi-level interchange).
- Displacements are limited to structures that appear to be unoccupied or otherwise unused.
- Expansion of the roadway pavement by the width of one vehicle lane or more, but the expansion is limited to a project area with at least one of the following main characteristics:
 - Rural projects - characterized by scattered residences, sparse population overall, and has limited pedestrian activity adjacent to the project area
 - Development is predominately industrial or agricultural
 - Widening roadway approaches for bridge work
- Construction of a new - or extension of an existing - raised median or median barrier where at least one of the following project descriptions is true:
 - Does not deny access to any driveways or cross streets (although travel patterns may still be impacted)
 - Does not continue longer than 3 miles without a break or crossover
 - Does not occur in front of a school or emergency responder dispatch location such as police stations, fire stations, or hospital emergency room (not to include standalone urgent care centers not associated with a traditional hospital)

☒ No *Completion of this Community Impacts Assessment Technical Report form is required. Proceed to **Section B**.*

☐ Other ***Consult ENV SME** to determine what level of documentation is required. After contacting, if the SME concurs that a summary statement is sufficient for this project, fill in the summary in the space provided below and leave this box checked.*

☐ Yes *If there is a reason to believe that the project would have the potential to result in adverse temporary or permanent impacts to community resources, proceed to **Section B**. Otherwise, provide a brief summary of why community impacts are not anticipated in the text box below to conclude the analysis. **Do not complete the remainder of this Community Impacts Assessment Technical Report Form.***

Summary Statement

The proposed project include converting approximately 18 miles of United States Highway (US) 75 between Interstate Highway (IH) 635 and State Highway (SH) 121 from the existing Managed Highway Occupancy Vehicle (HOV) lanes to Technology Lanes. The community study area was selected using the Census Tracts adjacent to the proposed project. Several community facilities were identified within the community study area. A site visit and the following analysis determined the proposed project would not negatively impact Environmental Justice (EJ) or Limited English Proficiency (LEP) populations, access or travel patterns, or community cohesion. No displacements are anticipated since all work would occur within the existing right-of-way (ROW) of US 75.

Prepared by: Brittney Davis, AICP, ENV SP

B. Community Study Area

Please answer all of the following questions in full sentences and proceed to **Section C**.

1. **Describe the overall objective of the improvements (e.g., to reduce congestion at an intersection, to improve operational efficiency, etc.).**

The proposed improvements would include converting the use of the existing Managed HOV lanes to Technology Lanes in areas along US 75 from IH 635 to Bethany in Allen and would add Technology Lanes from Bethany to SH 121 (Sam Rayburn Tollway). The proposed project is needed to alleviate traffic congestion along this segment of US 75.

The project would extend for approximately 18 miles along US 75 from IH 635 to SH 121 traversing through the cities of Dallas, Richardson, Plano, Allen, and the Town of Fairview in Dallas and Collin Counties, Texas. The project would be constructed entirely within TxDOT ROW.

See Attachment 1 for a project location map.

2. **Define the Community Study Area by identifying community study area boundaries, and describe the methodology used for developing the community study area (i.e. explain the reasoning for why the study area boundaries are appropriate for the project).**

Attach a map showing the community study area, the location of the project limits, as well as the locations of all community facilities within the study area (e.g., schools, places of worship, health care facilities, recreation centers, social services, libraries, emergency services, etc.).

Since the proposed project is approximately 18 miles long, traverses multiple cities, and counties, and is largely in an urban area, there were no clear physical boundaries by which to define the community study area. The adjacent Census Tracts were used to determine the community study area. These boundaries were selected to include residential areas and community facilities that may be impacted by the proposed project.

See Attachment 2 for a map of the community facilities within the community study area.

3. **Describe existing land use and community character.**

The existing land use within the community study area includes undeveloped parcels and a mix of urban areas including, commercial businesses, industrial properties, outdoor recreation (parks), schools, hospitals, places of worship, single-family residential neighborhoods, multi-family residential properties, emergency services, and municipal services.

Form Community Impacts Assessment Technical Report

4. Identify community facilities within the community study area by listing and describing them in the table below. Use this table to inform what is included in the map, described in B.2 above.

#	Name of Facility	Type of Facility (ex.: school, park, place of worship, etc.)	Public or Private?	Serves a Specific Population?	Adjacent to the Project?	Additional Details/Comments
1	Medical City McKinney	Medical	Public	No	Yes	Located approximately 0.10 miles from the proposed project.
2	McKinney Healthcare and Rehabilitation Center	Medical	Private	No	No	Located approximately 0.40 miles from the proposed project
3	Heard Natural Museum and Wildlife Sanctuary	Recreational/Park	Private	No	No	Located approximately 0.50 miles from the proposed project
4	New Jerusalem Baptist Church	House of Worship	Public	No	No	Located approximately 2.59 miles from the proposed project
5	Pentecostal Church of God	House of Worship	Public	No	No	Located approximately 2.47 miles from the proposed project
6	Fitzhugh Park	Recreational/Park	Public	No	No	Located approximately 2.14 miles from the proposed project
7	Little Blessings Preschool & Learning Center	School	Public	Yes	No	Located approximately 1.93 miles from the proposed project
8	Church of the Nazarene - Iglesia del Nazareno Renovación	House of Worship	Public	No	No	Located approximately 1.75 miles from the proposed project
9	Cottonwood Park	Recreational/Park	Public	No	No	Located approximately 1.39 miles from the proposed project.
10	St Mark Baptist Church	House of Worship	Public	Yes	No	Located approximately 1.69 miles from the proposed project

#	Name of Facility	Type of Facility (ex.: school, park, place of worship, etc.)	Public or Private?	Serves a Specific Population?	Adjacent to the Project?	Additional Details/Comments
11	Pecan Grove Cemetery	Cemetery	Public	No	No	Located approximately 1.19 miles from the proposed project.
12	Ross Cemetery	Cemetery	Private	No	No	Located approximately 1.09 miles from the proposed project.
13	Transportation Department	Social Service/Municipal	Public	No	No	Located approximately 0.13 miles from the proposed project.
14	Grand Reserve	Medical	Private	Yes	No	Located approximately 0.35 miles from the proposed project
15	Grand Texan	Medical	Private	Yes	No	Located approximately 0.40 miles from the proposed project
16	HarborChase of McKinney	Medical	Private	Yes	No	Located approximately 0.23 miles from the proposed project
17	Grand Brook Memory Care of McKinney	Medical	Private	Yes	Yes	Located approximately 0.15 miles from the proposed project
18	Women's Health Center of McKinney	Medical	Public	Yes	Yes	Located approximately 0.05 miles from the proposed project
19	Medical City Senior Health Clinic McKinney	Medical	Public	Yes	Yes	Located approximately 0.10 miles from the proposed project
20	The Pointe Christian Fellowship	House of Worship	Public	No	No	Located approximately 0.15 miles from the proposed project
21	Country Lane Seniors Community	Medical	Private	Yes	No	Located approximately 0.45 miles from the proposed project
22	Malvern Elementary School	School	Public	Yes	No	Located approximately 0.72 miles from the proposed project

#	Name of Facility	Type of Facility (ex.: school, park, place of worship, etc.)	Public or Private?	Serves a Specific Population?	Adjacent to the Project?	Additional Details/Comments
23	Recreation Center at Towne Lake	Recreational/Park	Public	No	No	Located approximately 0.79 miles from the proposed project
24	McKinney Fire Station 6	Emergency Service	Public	No	No	Located approximately 0.19 miles from the proposed project
25	Collin Higher Education Center	School	Public	No	Yes	Located approximately 0.10 miles from the proposed project
26	The Church of Jesus Christ of Latter-day Saints	House of Worship	Public	No	No	Located approximately 0.88 miles from the proposed project
27	Social Security Administration	Social Service/Municipal	Public	No	No	Located approximately 0.18 miles from the proposed project
28	Smile McKinney Dental	Medical	Private	No	No	Located approximately 0.32 miles from the proposed project
29	All About Children Pediatrics	Medical	Private	Yes	No	Located approximately 0.25 miles from the proposed project
30	McKinney ISD Community Event Center/Stadium	Recreational/Park	Public	No	No	Located approximately 0.26 miles from the proposed project
31	Arthur H. McNeil Elementary School	School	Public	Yes	No	Located approximately 0.73 miles from the proposed project
32	Lake Forest Animal Hospital	Medical	Private	Yes	No	Located approximately 1.02 miles from the proposed project
33	Primrose School of Eldorado	School	Private	Yes	No	Located approximately 1.13 miles from the proposed project
34	Highlands-Eldorado Veterinary Hospital	Medical	Private	Yes	No	Located approximately 1.12 miles from the proposed project

#	Name of Facility	Type of Facility (ex.: school, park, place of worship, etc.)	Public or Private?	Serves a Specific Population?	Adjacent to the Project?	Additional Details/Comments
35	Jesse McGowen Elementary	School	Public	Yes	No	Located approximately 0.50 miles from the proposed project
36	Additional community facilities within the community study area are included in Attachment 3.					

Form Community Impacts Assessment Technical Report

C. Demographics

Attach tables and maps to this Community Impacts Assessment Technical Report form detailing race/ethnicity (including Hispanic or Latino persons), language, and income. The TxDOT Census Data Tool includes all of this information in its screening report. Include other demographic data as appropriate, such as employment, disability, and age data for the community study area. A template demographics table is provided as Appendix A of this form found in the CIA Toolkit. Following completion of this section, proceed to **Section D**.

1. What data sources were used?

- ☒ U.S. Census Bureau
- ☒ American Community Survey (ACS)
- ☐ Texas Demographics Center
- ☐ Texas Education Agency – “Texas Academic Performance Reports”
- ☒ Site Visit – Date of Site Visit: 04/12/2022
- ☒ Current and/or historic aerial photographs
- ☐ Other

2. How many of the census geographies within the community study area indicate half or more of the population as minorities (e.g., 2 out of 10 census blocks within the community study area indicate half or more of their populations to be minorities)? Also consider whether any of the census geographies indicate an appreciably greater percentage of minorities compared to the next largest census geography (e.g., one block indicates a 45-percent minority population, while its parent block group indicates a five-percent minority population). What is the racial makeup of the minority census geographies? Minority data should be evaluated at the block level in most circumstances. Attach a map of these EJ census areas.

Of the 1314 populated census blocks located within the community study area, more than half (685) indicate half or more of their populations to be minorities. Some census blocks contain a greater percentage of minorities when compared to the Block Group. For example, Block Group 2 of Census Tract 309.03 in Collin County, contains approximately 48% minority populations, while

blocks 2001 through 2005 contain 74% to 90% minority populations. The racial makeup of the minority census geographies are primarily Hispanic/Latino, Black or African American, and Asian. See Attachment 4 for the demographic characteristics of the community study area.

3. What is the current U.S. Department of Health and Human Services (HHS) poverty level for a family of four, and what year is this based on?

Based on the DHHS 2022 Poverty Guidelines, the poverty level for a household of four is \$27,750.

4. How many of the census geographies show a median household income below the HHS poverty level? What are the median incomes of each those census geographies? If there are more than four block groups in the study area, list the range of incomes (e.g., Median income in the study area ranges from \$32,415 to \$47,651). Median household income should be evaluated at the block group level if available. Attach a map of these EJ census areas.

The median household income range for the community study area is \$19,643 to \$210,357. The following three census geographies show a median household income below the 2022 HHS poverty level of \$27,750.

- CT 309.03, BG 1 \$19,643
- CT 192.13, BG 1 \$21,154
- CT 316.32, BG 3 \$23,163

Median household income data was unavailable for the following census geographies.

- CT 309.03, BG 3
- CT 316.35, BG 4
- CT 318.09, BG 1
- CT 320.13, BG 2

See Attachment 4 for demographic characteristics of the community study area.

5. Do any of the census geographies show the presence of persons who speak English “less than very well?” Which languages are spoken by those with limited English proficiency? Language spoken should be evaluated at the block group level if available.

Of the 93 census blocks groups within the community study area, all of them show the presence of persons who speak English "less than very well." The primary languages spoken by these individuals are Spanish, Indo-European, and Asian and Pacific Islander.

D. Site Visit

*Following completion of this section, proceed to **Section E**.*

1. **Was a site visit conducted? If so, indicate when the site visit was conducted, attach documentation (including notes and photographs) from the field visit, and complete the rest of Section D.**

A site visit should be conducted for most projects within a reasonable time frame to provide accurate and timely information. If not, explain why site visit was either not conducted at all or was conducted outside of the general time period as this form.

A site visit was conducted on April 12, 2022. See Attachment 5 for site photographs.

2. **Were there signs observed in languages other than English? Describe the language(s) observed as well as the frequency and general location of signs in other languages (e.g., throughout the community study area, concentrated in a particular vicinity, etc.).**

While signs within the community study area were primarily in English, Spanish language signage was also observed. Spanish language signage was observed throughout the community study area but was predominately observed within the southern portion.

3. **Were there places of worship, businesses, services, or other community facilities that target or primarily serve specific minority groups?**

Several places of worship, businesses, services, and other community facilities that serve a specific minority group were observed.

4. **Were there observable signs of persons with disabilities, such as ramps on homes or public transportation vehicles, or stops specifically designed for persons with disabilities?**

Americans with Disabilities Act (ADA) compliant crossings were observed throughout the community study area.

5. **Were there signs of other vulnerable populations (including children and elderly persons), such as the presence of daycares, elementary schools, or assisted living facilities?**

There are several schools, daycares, assisted living facilities, and hospitals located within the community study area.

6. Were there signs of low-income populations or neighborhoods, such as government-subsidized housing, homes in disrepair, and low-cost health care facilities?

Signs of low-income populations or neighborhoods, such as low-cost health care facilities, were observed within the community study area.

7. Were there signs of other modes of transportation, such as bus stops, train stations, or designated bicycle lanes or bicycle lane signage? Did you observe cyclists in the area? Are there sidewalks or trails? Did you observe dirt pathways from pedestrian activity adjacent to the proposed facility? If any of these signs are present, please describe their location and extent and show on a map, if necessary.

Aside from vehicular traffic and sidewalks, other modes of transportation observed within the community study area included bike paths, bus stops, and Dallas Area Rapid Transit (DART) stations. None of these features are directly adjacent to the proposed project because it is located on a highway facility (US 75).

8. Based on the observations made during the site visit and the data provided in Sections B and C, summarize the general character of the community study area. Consider the present condition as well as the overall development trends within the community study area.

The general character of the community study area includes a mix of single and multi-family residential, commercial uses, institutional uses, and places of worship. While the main language spoken within the community study area is English, several Spanish language signs were observed throughout, but primarily within the southern portion, during the site visit.

Additionally, several places of worship that serve specific minority groups were observed within the community study area. The presence of medical facilities for both the senior populations and children were also observed throughout the community study area, and were generally clustered with adjacent assisted living facilities and preschool/childcare services.

Public transit was also prevalent within the community study area, such as DART stations and bus stops. However, none of the public transit features are directly adjacent to the proposed project.

E. Public Involvement

*Following completion of this section, proceed to **Section F**. Attempts should be made to integrate public involvement throughout the NEPA process. If timelines or other factors affect the possibility of conducting public involvement before this CIA, it is recommended that public involvement documentation be shared with ENV SMEs at a later date.*

- 1. Please describe the public involvement efforts planned or previously carried out for the proposed project. If no public involvement is planned, briefly explain why and proceed to section F.**

A public meeting for the proposed project will be held at a later time to be determined.

- 2. If public involvement has already occurred or is ongoing, what type of feedback has been received from the public regarding the proposed project or other community-related issues (i.e., what is the general sentiment of the public regarding the proposed project).**

Public involvement has not yet occurred.

- 3. If public involvement has already occurred or is ongoing, and if feedback has been received from the public, how has this feedback been incorporated into the proposed project? Have attempts been made to address specific concerns of the public?**

Public involvement has not yet occurred.

F. Displacements

Would the proposed project result in **any** potential displacements?

- ☒ No Proceed to **Section G**, Access and Travel Patterns.
- ☐ Yes Answer the questions in all applicable sections in F, then proceed to Section G. Check the types of displacements that apply:

<input type="checkbox"/>	Residential	Answer all questions in Section F.1 .
<input type="checkbox"/>	Commercial	Answer all questions in Section F.2 .
<input type="checkbox"/>	Other	Such as places of worship, community centers, or schools, answer all questions in Section F.3 .

1. Residential Displacements

- a. How many residences would potentially be displaced subject to final design considerations (including those that would be impacted in a manner that would prevent them from being occupied because of loss of parking or access, etc.)? What types of residences would potentially be displaced (e.g., single-family homes, apartments, duplexes, etc.)?

N/A

- b. Is there an adequate number of available replacement homes of comparable type, size, and cost? How was this determined? It should be noted that that costs associated with these properties are for analysis purposes only. Actual purchase price of acquired properties will be determined at the time of acquisition.

N/A

2. Commercial Displacements

If the number of employees at businesses that would be displaced represents less than five percent of the workforce in the community study area, then only the questions below should be answered.

*If the number of employees at businesses that would be displaced represents more than five percent of the workforce in the community study area, then answer all of the questions in this section and refer to **Appendix B** in the CIA Toolkit for guidance on how to further analyze economic impacts (unless there is reason to believe that the overall economic impact of the displacements on the community would nevertheless be minor, in which case discuss with an ENV SME before completing all of the questions in this section).*

- a. What types of businesses exist in the study area (e.g., commercial, retail, industrial, medical, etc.)?**

N/A

- b. Which businesses would potentially be displaced subject to final design considerations (including those that are impacted in a manner that would prevent them from continuing to operate because of loss of parking, removal of access, etc.)?**

N/A

- c. Are these businesses unique to the area? How far would a person have to travel to find a business offering similar services?**

N/A

- d. Do these businesses serve a specific population such as persons with disabilities, children, the elderly, a specific ethnic group, low-income families, or a specific religious group?**

N/A

- e. **Have any business owners indicated that they would or would not relocate if the proposed project is implemented?** *Base your answer on any information that is already available, there is no need to poll business owners for the sole purpose of answering this question.*

N/A

- f. **Do customers generally access these businesses by car, mass transit, walking, or bicycling?**

N/A

- g. **Are there replacement properties available for relocation of the businesses? Are there parcels available of comparable size, zoning, or special access needs (e.g., adjacent to a railroad)?**

N/A

3. Other Displacements

*Other displacements could include but are not limited to places of worship, community centers, or schools. If other displacements would occur, answer all of the questions in this section and proceed to **Section G**.*

- a. What non-residential and non-commercial displacements would potentially occur subject to final design considerations? Where are these facilities located?**

N/A

- b. Do the potentially displaced facilities serve a specific population such as persons with disabilities, children, the elderly, a specific ethnic group, low-income families, or a specific religious group?**

N/A

- c. Are there replacement properties available for relocation of comparable size or zoning?**

N/A

- d. How far would a person have to travel to find similar facilities or services?**

N/A

- e. Is there any opportunity to mitigate the impact to the facilities?**

N/A

G. Access and Travel Patterns

Would the project result in **permanent change to or loss of existing access, creation of new access, or permanent change in travel patterns to any modes of transportation?**

☐ No Proceed to **Section H, Community Cohesion**

☒ Yes Answer questions in the applicable sections

- If the project would improve an existing facility (including construction of new frontage roads along an existing highway), **complete Section G.1. only** and proceed to **Section H.**
- If the project would be constructed on new location but would not create a new bypass or reliever route, **complete Section G.2. only** and proceed to **Section H.**
- If the project would create a new bypass or reliever route, **complete Sections G.2. and G.3.** and proceed to **Section H.**

1. Changes in Access and Travel Patterns for Projects on Existing Facilities

- a. What modes do people currently use to access destinations in the community study area (car, walking, cycling, and/or mass transit)?

People within the community study area primarily access their destinations by car, cycling, walking, or mass transit.

- b. Describe the current travel patterns along the existing facility and within the community study area. Consider the travel patterns observed during the site visit as well as the potential origins and destinations of trips for people in the community study area. Consider all modes if multiple modes are used in the community study area.

While there are some smaller north-south thoroughfares or arterial roadways in the community study area, US 75 is the major north-south freeway. The existing US 75 corridor from IH 635 to Sam Rayburn Tollway (SRT) is an 8-lane (4 lanes in each direction) concrete paved controlled-access urban freeway with fully directional interchanges at the IH 635, President George Bush Turnpike (PGBT), and SRT. There is also a north-south DART line just east of US 75. Origins and destinations include residential areas, commercial businesses, medical facilities, nearby cities, which contribute to the high traffic volumes on US 75, IH 635, the PGBT, SRT/TX 121, and major cross streets.

- c. Describe how the proposed project would permanently change access and travel patterns along the facility and within the community study area compared to the existing condition, including beneficial and adverse impacts. Please include estimated travel time changes, as appropriate.**

The proposed project would permanently changes access and travel through the use of technology lanes that would utilize vehicular or roadside equipment to influence operations, incentivize vehicle occupancy, impact time of day travel decision, or provide other opportunities to accommodate the dynamic fluctuation of traffic flow and transportation needs.

- d. Describe the specific areas that would be affected by these changes, such as residences or businesses. Which community facilities listed in Section B.g. would be affected? Do any of the community facilities provide “essential services,” such as clinics, schools, or emergency response?**

Residential areas, commercial businesses, and community facilities within the community study may be affected by the proposed changes. The proposed improvements would alleviate congestion and allow drivers to reach their destination safely and more quickly. Several of the community facilities included in Section B.g. may be affected, including schools, medical facilities, and emergency services, which all provide an essential service.

- e. How would the proposed project affect emergency response times? Please calculate added distance and/or estimated travel times for any potential response time increases.**

It is anticipated that emergency response time would decrease since the proposed improvements would alleviate congestion.

- f. Are there active farms or ranches in the community study area? If so, would the project affect the movement of farm equipment or livestock trailers across the highway?**

There are no active farms or ranches within the community study area.

- g. Are any design elements proposed to mitigate adverse impacts to access and/or travel patterns?**

Adverse impacts to access and/or travel patterns are not anticipated.

2. Changes in Access and Travel Patterns for Construction of Highway on New Locations

- a. What modes do people currently use to access destinations in the community study area (car, walking, cycling, and/or mass transit)?**

N/A

- b. Describe the current travel patterns within the community study area. Consider the travel patterns observed during the site visit as well as the potential origins and destinations of trips for people in the community study area. Consider all modes if multiple modes are used in the community study area.**

N/A

- c. Describe the changes in access and travel patterns that would result from the proposed project, including any beneficial and adverse impacts. For new location projects, consider whether access to previously inaccessible areas would be created, as well as how the introduction of the project to the area could change previously established travel patterns on other facilities in the community study area.**

N/A

- d. Describe the specific areas that would be affected by these changes. What residences or businesses are located near the proposed new-location facility? Which community facilities listed in Section B.d. would be affected? Do any of the community facilities provide “essential services,” such as clinics, schools, or emergency response?**

N/A

- e. How would the new highway affect emergency response times?**

N/A

- f. Is land adjacent to the new-location highway available for development?**

N/A

- g. Are there active farms or ranches in the community study area? If so, would the project affect the movement of farm equipment, livestock, or trailers across the highway?**

N/A

- h. Are any design elements proposed to mitigate adverse impacts to access and/or travel patterns?**

N/A

3. Changes in Access and Travel Patterns for New Bypass or Reliever Route Projects

- a. What businesses are located along the existing corridor for which the bypass or reliever route would be created? Which of these businesses are primarily dependent on passing traffic for business (e.g., gas stations, restaurants, hotels, etc.)?**

N/A

- b. Are frontage roads proposed as part of the project? If so, describe the type and location of the frontage roads.**

N/A

- c. Describe any mitigation or design element, such as new signage, proposed to address adverse impacts to existing traffic-dependent businesses.**

N/A

H. Community Cohesion

Does the project involve one or more of the following elements?

- Construction of a highway on new location
- Construction of a new grade separation of more than one level
- Construction of a new interchange
- Expansion of an existing facility or interchange by a width equal to or greater than an existing travel lane.
- Upgrade of a non-freeway facility to a freeway facility
- Addition of tolled or managed lanes
- Construction of a new raised median or extension of an existing raised median that will prevent access to a least one driveway or cross street.
- Introduction of a new median along a previously undivided facility

☐ No Proceed to **Section I, Environmental Justice.**

☒ Yes Answer all questions in this section and proceed to **Section I.**

1. Briefly characterize the existing level of community cohesion. Ideally, this information should be based on feedback from members of the affected community or communities. If no such information is available, rely on geographic characteristics, development patterns, and observations made during the site visit.

Based on observations of the website of the various communities within the community study area (i.e., McKinney, Fairview, Allen, Plano, Richardson, and Dallas), there is a mix of annual traditional holiday celebrations with weekly events for more consistent community engagement. Each of the adjacent cities hold similar community events and aim to encourage community cohesion with their larger annual festivities, as well as civic engagement with various open community planning meetings. While some cities focus on broader events, others focus on providing services and events for minority communities. For example, Fairview offers a Senior Hiking Trip focused on their elderly population.

2. Describe whether construction of the proposed project would change the existing level(s) of separation experienced near the project area. Changes in separation could include but are not limited to introduction of a new physical barrier; expansion of an existing physical barrier; or contribution to a perceived sense of separation by constructing a new grade separation. Consider all modes if multiple modes are used in the community study area.

The proposed project would convert the existing HOV lanes between IH 635 and Bethany Drive to a peak hour technology lane. Restriping would occur from Bethany Drive to SRT/SH 121 to add the peak hour technology lane. However, work would occur within the existing right-of-way of US 75. Although a lane would be added along this segment of US 75, the degree of separation between the communities would not change.

- 3. Describe whether the changes associated with the proposed project (including impacts to access and travel patterns) would directly or indirectly result in separation or isolation of any geographic areas or groups of people. Consider all modes if multiple modes are used in the community study area.**

The changes associated with the proposed project would all occur within the existing right-of-way. Separation or isolation of any geographic areas or groups of people is not anticipated.

- 4. Describe whether the changes associated with the proposed project would affect use of local services and community facilities. Would the project make access to these services and facilities more or less convenient? Would the frequency with which people access other parts of the community change? Consider all modes if multiple modes are used in the community study area.**

The proposed project would make access to local services more convenient. The frequency with which people access other parts of the community is not anticipated to change.

- 5. Are any design elements proposed to mitigate adverse impacts to community cohesion?**

The proposed project is designed to decrease congestion through updated traffic direction and driver influence. No adverse impacts to community cohesion are anticipated.

I. Environmental Justice

Based on the data provided in Section C., does the community study area include any minority or low-income census geographies (i.e., “EJ census geographies”)?

- ☐ No *Proceed to **Section J, Limited English Proficiency.***
- ☒ Yes *Answer all questions in this section and proceed to **Section J.***

1. If the project would result in displacements, how many of these displacements would be located in EJ census geographies versus non-EJ census geographies?

No displacements would occur due to the proposed project.

2. Would there be impacts related to access and/or travel patterns? If yes, what types of impacts would occur in EJ census geographies versus non-EJ census geographies?

The proposed project would increase access and improve travel patterns. No impacts to EJ and non-EJ census geographies are anticipated.

3. Would there be impacts related to community cohesion? If yes, what types of impacts would occur in EJ census geographies versus non-EJ census geographies?

Impacts to community cohesion are not anticipated.

4. Do any of the displaced businesses, community facilities or services specifically cater to minority or low-income populations? Would the services provided cease, be reduced, or be forced to temporarily stop if displaced? If so, where is the nearest comparable service provided? Consider the effects to EJ populations that reside within the community study area as well as EJ populations that may reside elsewhere but still rely on the services being provided by these establishments.

No displacements would occur due to the proposed project.

- 5. Based on the other technical documentation prepared for the proposed project, would there be any impacts to the human environment (e.g., noise, air quality, etc.) that could affect the community study area? If yes, would these impacts occur in EJ census geographies or non-EJ census geographies?**

Noise levels may increase at the north end of the project since it would add capacity to the existing US 75 facility. However, the traffic noise analysis has not yet been conducted.

- 6. Has the community experienced substantial impacts from past transportation projects such as a new roadway causing a large number of displacements or introducing a barrier and separating parts of the community? Describe any recurring community impacts that may be perpetuated by the proposed project.**

The presence of US 75 as a major roadway through the community study area has allowed for community growth from rural and agricultural to more urban communities. Reviewing Google Earth aerial timeline images of the along the community study area (years 1984-2021), the majority of urban development was present in Dallas, McKinney, Plano, and the east side of Allen. However, there was development that expanded outward along and adjacent to US 75. While there has been widespread development throughout the community study area, the areas that have grown most over this time period are the communities on the west side of the US 75 between Plano and McKinney. Many of those areas were undeveloped or agricultural and now they are now mostly residential. Large transportation projects such as the DART rail, which began in 1983, have also shaped the surrounding communities. In terms of current and ongoing transportation projects in the community study area, voters in Collin County approved a \$235.6 million transportation bond package in November 2007 to support street and highway improvements throughout the county, resulting in construction of additional rural and county roads. There has also been significant residential development that has occurred as result of transportation projects within the community study area. However, recurring community impacts as a result of the proposed project are not anticipated.

- 7. Have there been any major infrastructure projects, industrial facilities, or other large-scale developments constructed in or adjacent to the community area?**

There is ongoing commercial, industrial, and residential development occurring within the community study area and along the length of the proposed project area. US 75, as well as the intersecting roadways included with the proposed project area, serve as major connects for people and facilities to access necessary resources within the community study area. The majority of development directly adjacent to the proposed project area are commercial and manufacturing ranging from shopping centers to a large Raytheon facility towards the southeast end of the project area. However, large medical facilities, schools, and places of worship are also present along the proposed project area.

8. Are there any minimization or mitigation efforts proposed specifically to lessen impacts to EJ populations?

Negative adverse impacts to EJ populations are not anticipated. No minimization or mitigation efforts are being proposed.

9. In consideration of all the impacts to EJ populations described above and any mitigation proposed, would impacts to EJ populations be disproportionately high and adverse when compared to impacts to and mitigation for impacts to non-EJ populations? Describe why or why not.

No disproportionately high and adverse impacts to EJ populations are anticipated. The proposed project would not result in any displacements, and negative impacts to community cohesion are not anticipated.

J. Limited English Proficiency

Based on the data provided in Section C. and observations made during the site visit, are LEP persons likely to be present in the community study area? Remember that requests for accommodations **must** be considered, and in most cases provided.

- ☐ No Proceed to **Section K, Conclusions.**
- ☒ Yes Answer all questions in this section and proceed to **Section K.**

1. What languages do the LEP persons likely to be present in the community study area speak?

Spanish was the most prevalent non-English language spoken in the community study area. The remaining consisted of Indo-European, Asian and Pacific Islander, and other languages.

2. If public involvement events have occurred or are ongoing, then describe the accommodations that have been made for LEP persons during the public involvement process. Was assistance in a language other than English requested or is it anticipated to be requested? Were notices for public involvement opportunities provided in languages other than English? Were services such as translation or interpretation provided during public involvement events?

Alternatively, describe why no accommodations were provided.

Public involvement has not yet occurred for this project. However, TxDOT will make every reasonable effort to provide meaningful access to public involvement activities.

3. Are more public involvement efforts planned? If yes, has the plan to accommodate LEP persons changed based on past public involvement feedback?

Public involvement has not yet occurred for this project. However, TxDOT will make every reasonable effort to provide meaningful access to public involvement activities.

K. Conclusions

Following approval of the Community Impacts Assessment Technical Report form by TxDOT ENV, this summary must be included in the draft EA or draft EIS, if one is being prepared.

In the text box provided below, provide a summary of the analysis conducted above and include the following information:

- Whether EJ populations occur within the community study area
- Summary of impacts related to displacements
- Summary of impacts related to access and travel patterns
- Summary of impacts related to community cohesion
- Summary of impacts to EJ populations, including a statement regarding whether, in consideration of all the impacts to EJ populations described above and any mitigation proposed, impacts to EJ populations would be disproportionately high and adverse when compared to impacts to and mitigation for impacts to non-EJ populations
- Summary of LEP issues and accommodations

If some of the above components of the analysis do not apply to a particular project, please indicate this in the conclusion statements (i.e., “The proposed project would not result in any displacements; therefore, a displacements analysis was not required.”).

The proposed project would permanently changes access and travel through the use of technology lanes that would utilize vehicular or roadside equipment to influence operations, incentivize vehicle occupancy, impact time of day travel decision, or provide other opportunities to accommodate the dynamic fluctuation of traffic flow and transportation needs.

The existing HOV facility is proposed to be converted to Peak Hour (Technology) lane with continuous access provided to GP lanes with broken white stripes between IH-635 and SRT with technology gantries at various locations along the corridor.

- The proposed section along US 75 between (SRT and south of Bethany Drive) includes 11 ft GP lanes, 11 ft peak hour (technology) lane, varying 7 to 11 ft outside shoulder and 3 -5 ft inside shoulder each direction.
- The proposed section from south of Bethany Drive towards - IH-635 includes 11 ft GP lanes, 12 ft peak hour(technology) lanes, 10 -11 ft outside shoulder and 5 ft inside shoulder with concrete barrier.
- No ROW is being acquired for the proposed facility design for the HOV to Peak Hour (technology) lane conversion project."

The overall community study area boundaries were selected based on the adjacent Census Tracts along the proposed project area. Various community facilities were identified within the community study area.

The community study area contains EJ and LEP populations; however, disproportionately high or adverse impacts to these populations are not anticipated. The proposed project would not result in any displacements; therefore, a displacements analysis was not required. The proposed project is anticipated to have beneficial impacts on access and travel patterns. Impacts to community cohesion are not anticipated.
